

Foxes Class

Trip To Herstmonceux Observatory

In the discovery Park we learnt how an Archimedes Screw can move objects by twisting.

In the Water Park we explored the power of water.

"We learnt that magnets with holes in, keep things moving, If they don't have holes in them they stop!"

Wednesday 12TH October 2022

To further develop our understanding of engineering processes, we visited The Science Centre in Herstmonceux. The children had the opportunity for hands on investigating, deepening their understanding the design process behind how things are made.

We put the learning from our science focus into practice in the forces section of the centre.
